

安装MongoDB

注册开机启动

`sudo vim /etc/init.d/mongodb`

`sudo chmod +x /etc/init.d/mongodb`

注册开机脚本

`sudo update-rc.d mongodb defaults`

注意：移除用`sudo update-rc.d -f mongodb remove`

```
#!/bin/sh

### BEGIN INIT INFO
# Provides:      mongodb
# Required-Start:
# Required-Stop:
# Default-Start: 2 3 4 5
# Default-Stop:  0 1 6
# Short-Description: mongodb
# Description: mongo db server
### END INIT INFO

. /lib/lsb/init-functions

PROGRAM=/usr/local/mongodb/bin/mongod
MONGOPID=`ps -ef | grep 'mongod' | grep -v grep | awk '{print $2}'`

test -x $PROGRAM || exit 0
case "$1" in
  start)
    ulimit -n 3000
    log_begin_msg "Starting MongoDB server"
    $PROGRAM -f /etc/mongod.conf
    log_end_msg 0
    ;;
  stop)
    log_begin_msg "Stopping MongoDB server"
    if [ ! -z "$MONGOPID" ]; then
      kill -15 $MONGOPID
    fi
    log_end_msg 0
    ;;
  status)
    ;;
  *)
    log_success_msg "Usage: /etc/init.d/mongodb {start|stop|status}"
    exit 1
esac
exit 0
```

命令

启动

`sudo service mongod start`

注意可能报错

Failed to start mongod.service:  
Unit mongod.service not found

解决

`sudo chown root:root /tmp`  
`sudo chmod 777 /tmp`  
`sudo ls -ld /tmp`

停止

`sudo service mongod stop`

客户端链接

`mongo`

`sudo pip install pymongo`
